FinTec convection technology

FinTec is one step ahead. Our engineers has created the new and innovatice´convection technology.

The main advantages are clear.

- The heating elements will not be in contact with the sauna stones.
So the lifetime of the elements is much more longer.
- Because of the connection pipe inside of the heater the sauna room will be heated up very quickly.
Now we have a perfect mix of convection and radiation heating. This will save the energy costs explicit.

Details:

- inspection chamber
- professional cabel screw connection
- fixation to the wall
