## Electric sauna heater

### KAJA

Leave stress behind, switch off and simply relax - no problem with FinTec KAJA!

It does its job reliably and permanently without time-consuming study of instructions - bringing your sauna up to operating temperature in the shortest possible time. The technology fades into the background - what remains is pure relaxation.

KAJA is your high-quality entry into the world of niche sauna heaters. KAJA is characterised by high material thicknesses and the consistent use of stainless steel. Unique is the small space requirement due to a minimum safety distance to the wall of only 5 cm.

### Convection - The perfect sauna experience

Generously dimensioned air vents on the top and bottom of the sauna heater ensure optimum air circulation and low surface temperatures. At the same time, the heated air is distributed over a large area, allowing the sauna to heat up quickly. The high stone volume guarantees a perfect sauna climate.

### Design - flexibility and efficiency in one

The small dimensions combined with minimal safety distances to combustible materials allow for extremely space-saving installation. In addition, the KAJA design allows for easy cleaning: the sauna stones can be removed particularly easily and the interior walls can be cleaned effortlessly.

### Installation - Because versatility always has a future

KAJA is first and foremost a wall-mounted sauna heater and is quickly and easily installed on the sauna wall using the wall bracket supplied. KAJA can also be used as a classic free-standing sauna heater thanks to the optionally available feet.
